### TERM

The Sub-Fund is established for an unlimited duration. However the Board of Directors may decide to close this product under certain circumstances.

### OBJECTIVES

The Fund Manager takes a flexible Long Bias Equity Euro type of investment approach using a technique based on fundamentals to select financial instruments.

The Sub-Fund is actively managed without any reference to a benchmark. The Investment Manager has discretion over the composition of its portfolio subject to this objective and investment policy.

This Sub-Fund comprises a portfolio invested in equities, other similar transferable securities and fixed or floating rate bonds admitted to the official listing of a stock exchange or traded on another Regulated Market.

Equities shall be issued mainly by European Union companies. Investments in small- and mid-caps (i.e. companies with market capitalisation lower than EUR 1 billion at the time of purchase and for all the holding period) shall not exceed 50% of the Sub-Fund's net assets.

Investments in financial instruments that are unrated or are rated below investment grade may not exceed 10% of the Sub-Fund's assets.

The Sub-Fund may also invest up to 10% of its assets in the units of UCITS and other UCIs.

The Sub-Fund may invest up to 5% of its net assets in contingent convertible bonds.

The Sub-Fund may hold Ancillary Liquid Assets (up to 20% of its net assets) in order to cover current or exceptional payments or for the time necessary to reinvest those Ancillary Liquid Assets in eligible assets. It may also invest in deposits and money market instruments.

In order to manage foreign exchange risks, investments in currencies other than the portfolio's reference currency may be hedged.

For the purposes of hedging risks and of efficient management and investment, the Sub-Fund may use derivatives traded on a regulated or overthecounter market. Total exposure to derivatives may not exceed the subfund's net asset value.

The Sub-Fund will not use any SFT or TRS.

Sale of shares in the subfund can be made on any business day.

## What are the risks and what could I get in return?

### Risk indicator

The risk indicator assumes you keep the product for 3 years.

The actual risk can vary significantly if you cash in at an early stage and you may get back less.

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you.

The essential risks of the investment fund lie in the possibility of depreciation of the securities in which the fund is invested.

### Performance scenarios

The figures shown include all the costs of the product itself, but may not include all the costs that you pay to your advisor or distributor. The figures do not take into account your personal tax situation, which may also affect how much you get back. What you will get from this product depends on future market performance. Market developments in the future are uncertain and cannot be accurately predicted.

The unfavourable, moderate, and favourable scenarios shown are illustrations using the worst, average, and best performance of the product over the last 10 years. Markets could develop very differently in the future.

## What are the costs?

The person advising on or selling you this product may charge you other costs. If so, this person will provide you with information about these costs and how they affect your investment.

### Costs over time

The tables show the amounts that are taken from your investment to cover different types of costs. These amounts depend on how much you invest, how long you hold the product and how well the product does. The amounts shown here are illustrations based on an example investment amount and different possible investment periods.

We have assumed:

- In the first year you would get back the amount that you invested (0 % annual return). For the other holding periods we have assumed the product performs as shown in the moderate scenario.

- EUR 10 000 is invested.

Investment of EUR 10 000	If you exit after 1 year	If you exit after 3 years
Total costs	EUR 309	EUR 1 016
Annual cost impact (*)	3.1%	3.1%

(\*) This illustrates how costs reduce your return each year over the holding period. For example it shows that if you exit at the recommended holding period your average return per year is projected to be 6.3% before costs and 3.2% after costs.

We have classified this product as 3 out of 7, which is a medium-low risk class.

This rates the potential losses from future performance at a medium-low level, and poor market conditions are unlikely to impact our capacity to pay you.

**Be aware of currency risk. You will receive payments in a different currency, so the final return you will get depends on the exchange rate between the two currencies. This risk is not considered in the indicator shown above.**

Please refer to the Prospectus for more information on the specific risks relevant to the product not included in the summary risk indicator.

This product does not include any protection from future market performance so you could lose some or all of your investment. If we are not able to pay you what is owed, you could lose your entire investment.
